Description /Technique

Description:
This solution is recommended by the European Pharmacopoeia to dilute samples for microbiological examination. The quantity of emulsifying agent used will depend on the amount of fat in the sample being examined.

The addition of he neutralizing agents TLH (Polysorbate 80 - Lecithin - Histidine) may inactivate a variety of disinfectants.
* The combination of lecithin, polysorbate 80 and histidine neutralizes aldehydes and phenolic compounds.
* The combination of lecithin and polysorbate 80 neutralizes the quaternary ammonium compounds.
* The polysorbate 80 neutralizes quaternary ammonium , Iodine, parabens.
* Lecithin neutralizes Quaternary Ammonium Compounds (QACs), parahydroxybenzoates (parabens), bis-biguanides.
* Histidine neutralizes formaldehyde.

Technique:
Use the medium according to intended purposes, samples and validated methods.
